

## MASS MANAGER

### Easy to manage regulatory compliance provides drivers and fleet managers with peace of mind

With strict regulations in place and frequent checks made, it's important your drivers know their vehicle's payload and whether that's suitable for their planned route. Getting it wrong can result in heavy penalties and the grounding of vehicles.

Drivers are able to record axle group mass and vehicle configuration directly on the in-vehicle device, along with other details as required under the NHVAS like job identification numbers and weighbridge receipts. This improves back-office processes and helps you remain compliant by giving everyone in the transport chain immediate access to accurate information that can be printed or exported into Excel, ready for audit.

Drivers and fleet managers have full visibility once mass has been entered into Mass Manager after visiting a weighbridge. Accurate data is immediately transferred from the truck's cabin to the office so you'll know instantly if a vehicle is overweight. All this ensures everyone in the transport chain remains safe and compliant with regulations.

### Mass Manager's features and benefits

- Record axle group mass and vehicle configuration along with trip information.
- Helps improve processes around the management of NHVAS requirements.
- Streamlines the audit process, with one-click export or integral reports.
- Mass information immediately communicated with the back-office. Key data is stored electronically so it doesn't have to be re-entered, delivering efficiency savings and improving NHVAS data accuracy.
- Easy to input and store data.
- Data is reported in real time and easily exported to Excel so it's ready for the auditors.
- Eliminates paperwork from the office and the truck's cabin.
- Record axle group weights or a single quantity.
- It's configurable by truck combination.
